# STRIPE METHOD by @cashout_kingdom

This is a private method tested by me (@cashout_kingdom_admin) and its 100% working if you follow

detailed instructions.

NEEDED ITEMS

1. Good Website cloned or Properly Setup

2. Domain registered email

3. Merchant Account

4. Dead Fullz not including CC details just DOB and SSN

5. US Checking Account or savings account. Only the routing number and account

number is needed so you can change the account at any time without problem since

account name is not needed. It only works with US Bank Account.

METHOD STRIPE

What is Stripe? Stripe is the easiest way to accept credit and debit card payments online. With Stripe, you can create exactly the payment

experience you want in your website or mobile app, and we handle everything from security to daily transfers to your bank account. You can get started immediately.

HOW DOES IT WORK

1. Go to Stripe.com and Register for a Merchant Account with your Website as Business name note you must have an SSN or DOB to register the company its very easy to register next do not use a free email to register as a merchant your account would be setup immediately and domain name will be confirmed since you used domain registered email.

2. There are detailed step to step guide there on how to intergrate the payment form into your website then you are ready to cashout your CVV both non vbv and vbv card work effectively worldwide cards also work effective. Advantage over other processor you can charge ccv yourself on the dashboard of your stripe account without charging it through your website. Payments are transferred into your bank account within 7 days not like other processors that send payment in 30 days.

NOTE

- To be effective do not charge more than 300$ for US CVV and more than 500$ for International CVV. With this method you can make as much as 5000$ on weekly basis.

- When charging a CVV use the same state socks and for international CVV use

the same country socks since it takes note of charges done and ip don't use dead

CVV for charging be sure card is live before you attempt charging any cards since if

too much failed cards is noted your account can be blocked.
